

## 5

A method of using an intercom on a cordless telephone during an active call. The active call is put on hold while the intercom is in use. Once the call is re-activated, the intercom is shut off. This system may be designed for a cordless telephone with one handset or a plurality of handsets.

Figure 1 consists of 12 scatter plots, labeled (a) through (l), arranged in a 6x2 grid. Each plot shows the relationship between the number of children (N) on the x-axis and the number of children who are also parents (Np) on the y-axis. The data points are represented by open circles. The plots show varying degrees of correlation, with some showing a strong positive relationship and others showing a weaker or no relationship. The species names are listed on the right side of each plot.
